Product: “CIRCULAR” wooden bench with “TIMELESS 1220” planter. The planter is equipped with a **levelling system** and a **water reserve system** to guarantee the soil the proper humidity level, avoiding the dispersion of internal water.

Dimensions: external diameter: 1760 mm;
height: 650 mm;
total weight: 990 kg;
capacity: 300 litres.

Material: The bench is composed by 40 wooden slats offered with three different types of essence: pine, okumè or exotic wood (please see respective material sheet). The slats are cut at their extremities to fit the lateral planters’ perimeter. All slats are linked with steel self-tapping screws and PVA glue. The planters can be manufactured using reconstituted natural marble stones, white granite or grey concrete conglomerate. Copper or stainless steel central band.

Reinforcing: The planter’s base is reinforced and endowed with hooks that permit its lifting. The superior rings are also equipped with a circular reinforcement and steel stirrups with lifting hooks for the installation.

Finishing: The planters’ surface can be polished, to give the product a shiny effect, otherwise sandblasted or bush-hammered, for a rough appearance. Surfaces are then covered with a transparent anti-decay coating, or, upon request, with anti-graffiti products. The copper band is painted with a protective coating for a durable shiny appearance, while the stainless steel band undergoes a satin finish treatment. All wooden elements in pine and okumè can be impregnated and painted with a protective varnish, the exotic wood is impregnated and, upon request, varnished. All edges are rounded or made blunt.

Handling: Use appropriate equipment when handling, using the planters’ internal hooks.

Installation: Place the base and level the three bolts M20. Then place the superior part.
